Timbercrete

Timbercrete contains more than 50% by volume of recycled sawmill waste. Homes made of this product consume less energy for heating/cooling. Timbercrete acts as a “carbon sink” preventing the release of carbon dioxide from decomposing sawdust into the atmosphere. Timbercrete® achieved FRL 240−240−240 in CSIRO Fire Test, therefore provides as high a level of protection against fire related threats. It can be used in a wide range of domestic, commercial, industrial and public buildings.
